

# CS-175 Group Project

Cristo Coyote, Julius Abaane Nsorh, and Michelle Santamaria

# The Problem

Client: Mrs. Seals of the Office of Undergraduate Admissions

- Students get lost in the Great Hall often and have to ask around to find their classes.
- Staff would rather not have to answer these questions

## The Solution

- Build a program that can direct students to their classes based on the room number

## Pseudocode

- Ask for classroom number
- Use first number to identify floor
- Use other numbers to identify location
- Use floor and location to tell students how to get to classroom from main entrance
- Display directions to classroom for students
